

February 22, 2013

To whom it may concern

The South Health Campus project replacement healthcare facility, opening 2012/2013, has installed Meditek equipment within various departments and we are pleased to have worked with both their installation and design teams.

The design team have been most helpful in providing insight and direction to accommodate the needs of the specific departments. They are organized, experienced in coordinating with other associated equipment and professionally congenial in their approach.

The installation team worked well with the construction managers and our project managers in providing a professional finished product.

We would work again with the groups again.

Sincerely,

John Walton,
Project Manager
