Re: Letter of Reference for Meditek Surgical

Over the last 4 years the EllisDon project team at the Foothills Medical Centre in Calgary has had to coordinate equipment installations with Meditek several times.

Our inter-related efforts have been specific to surgical applications throughout various locations within the healthcare facility. They include but are not limited to:

- Fit-out of nine (9) new operating rooms
- Fit-out of a new post anesthesia care unit
- Fit-out of two (2) state-of-the-art interventional trauma operating theatres
- Fit-out of six (6) procedure rooms

Meditek's products and installations at this hospital have been regarded as nothing short of first class, and it is my personnel opinion that their team performs at a higher standard than others in the industry. Never have I had difficulties contacting their personnel, they meet schedules, they follow facility protocols, and they come to the table with solutions rather than interferences when site conditions lead to variation in design.

I definitely recommend Meditek's products and services when it comes to a healthcare facility application.

Sincerely,

Lucas Gill
Project Manager – Foothills Medical Centre
